OPEN CITIZEN SCIENCE PROJECT

By Heidi Laine

heidi.laine@okf.fi / @heidiklaine

This work is licensed under a [Creative Commons Attribution 4.0 International License](https://creativecommons.org/licenses/by/4.0/).

**PROJECT
FUNDED BY
THE OPEN
SCIENCE AND
RESEARCH
INITIATIVE**

GOAL OF THE PROJECT

- create discussion on citizen science
- form understanding about the possibilities of citizen science
- provide recommendations for national level policy action.

CITIZEN SCIENCE

“Citizen science is a flexible concept [...] Citizen science projects actively involve citizens in scientific endeavour that generates new knowledge or understanding. [...] Citizen science projects have a genuine science outcome.” - ECSA: 10 Principles of Citizen Science <http://ecsa.citizen-science.net/documents>

SIX DEGREES OF OPEN SCIENCE

Open Science in Practice: Researcher Perspectives and Participation, Whyte, Angus & Pryor, Graham. The International Journal of Digital Curation, Issue 1, Volume 6 | 2011

Private management
Collaborative sharing
Peer exchange
Transparent governance
Community sharing
Public sharing*

*Sharing where resources are made available for access by any member of the public, at least some data or metadata on the research activity is designed to be understood by a lay audience and reused by a designated research community, and with few restrictions - such as a limited embargo period.

POLICY PUSH FOR CITIZEN SCIENCE

FINNISH OPEN SCIENCE ROADMAP 2014-17 ON CITIZEN SCIENCE

Goal

Open science creates new opportunities for researchers, decision-makers, business, public bodies and citizens.

“When this objective has been achieved [...s]cientific literacy will have increased among citizens,[...c]itizen science will have progressed. Circulating and announcing research results outside the academic community will have become standard practice.”

<http://openscience.fi/open-science-and-research-roadmap-2014-2017>

EC DRAFT OPEN SCIENCE AGENDA

<p>Need to remove obstacles to the involvement in research (as co-producers) of non-academic actors</p>	<p>Allow research funders to provide specific incentives for 'collaborative science' including societal actors and citizen science</p>	<p>Consider adapting The Rules for Participation and/or Model Grant Agreement to enable launching Open Science pilots (e.g. under H2020)</p>	<p>Citizen science eligible for funding. Introduce openness as criterion for receiving research funding</p>	<p>Strong stakeholders support (more than 80% agree)</p>
<p>Need to foster stronger relation between science and society as well as science and business actors to accelerate innovation</p>	<p>Better network societal, entrepreneurial and scientific actors through e.g. 'knowledge coalitions'</p>	<p>Set up and support 'knowledge coalitions' to address common societal challenges as per H2020. Implement Joint Open Science Initiatives (JOSI's)</p>	<p>Invite companies/SME's and universities to events to brainstorm around different business opportunities</p>	<p>Stakeholder consensus on the need to address societal challenges and faster and wider innovation</p>

LERU will publish their advice on citizen science and universities on 7 Nov. 2016

Sneak peek to LERU recommendations
for Universities

1. Recognise CS as a method
2. Single point of contact on CS
within institution
3. Criteria for successful CS
4. Include long-term support for CS
infra in grant proposals
5. Ethical, legal, privacy constraints
respected
6. Adapt evaluation, reputation
systems to CS

ARGUMENTS FOR CITIZEN SCIENCE

“Citizen volunteers cost even less than postdocs, it turns out.” - Jason Lloyd: Citizen Science Isn't Just About Collecting Data
http://www.slate.com/articles/technology/future_tense/2016/08/citizen_science_isn_t_just_about_collecting_data.html

“Presidential science advisor John Holdren estimated in September 2015 that time and labor donated by citizen scientist to biodiversity research had an ‘economic value up to \$ 2,5 billion per year’.” - Darlene Cavalier, Eric B. Kennedy: The Tightful Place of Science: Citizen Science (Consortium of Science, Policy & Outcomes, 2016)

UNTAPPED KNOWLEDGE POTENTIAL

“Citizen scientists collect more than data. They gather meaning.” - Bonney, Rick, and Janis L. Dickinson. Citizen Science : Public Participation In Environmental Research. Ithaca: Comstock Pub. Associates, 2012. eBook Collection (EBSCOhost). Web. 20 Oct. 2016.

LESS BUDGET CUTS?

Stronger appreciation for science among citizens and policy makers.

RESEARCH THAT HAS REAL IMPACT

Through evidence based policy
making, evidence based health care,
evidence based daily lives.

MORE RESPONSIBLE SCIENCE?

“retractions, fraudulent practices, reproducibility problems, conflicts of interest, conflicting results, and simple irrelevance.[...] scientists are rarely accountable to anything outside their community.” -

Jason Lloyd: Citizen Science Isn't Just About Collecting Data

http://www.slate.com/articles/technology/future_tense/2016/08/citizen_science_isn_t_just_about_collecting_data.html

HOW COULD
CITIZEN SCIENCE
BE MORE OPEN?

IAP2 Best Practice Standards for Public Participation

Inform

Consult

Inform

Low level of
public engagement

Involve

Mid level of
public engagement

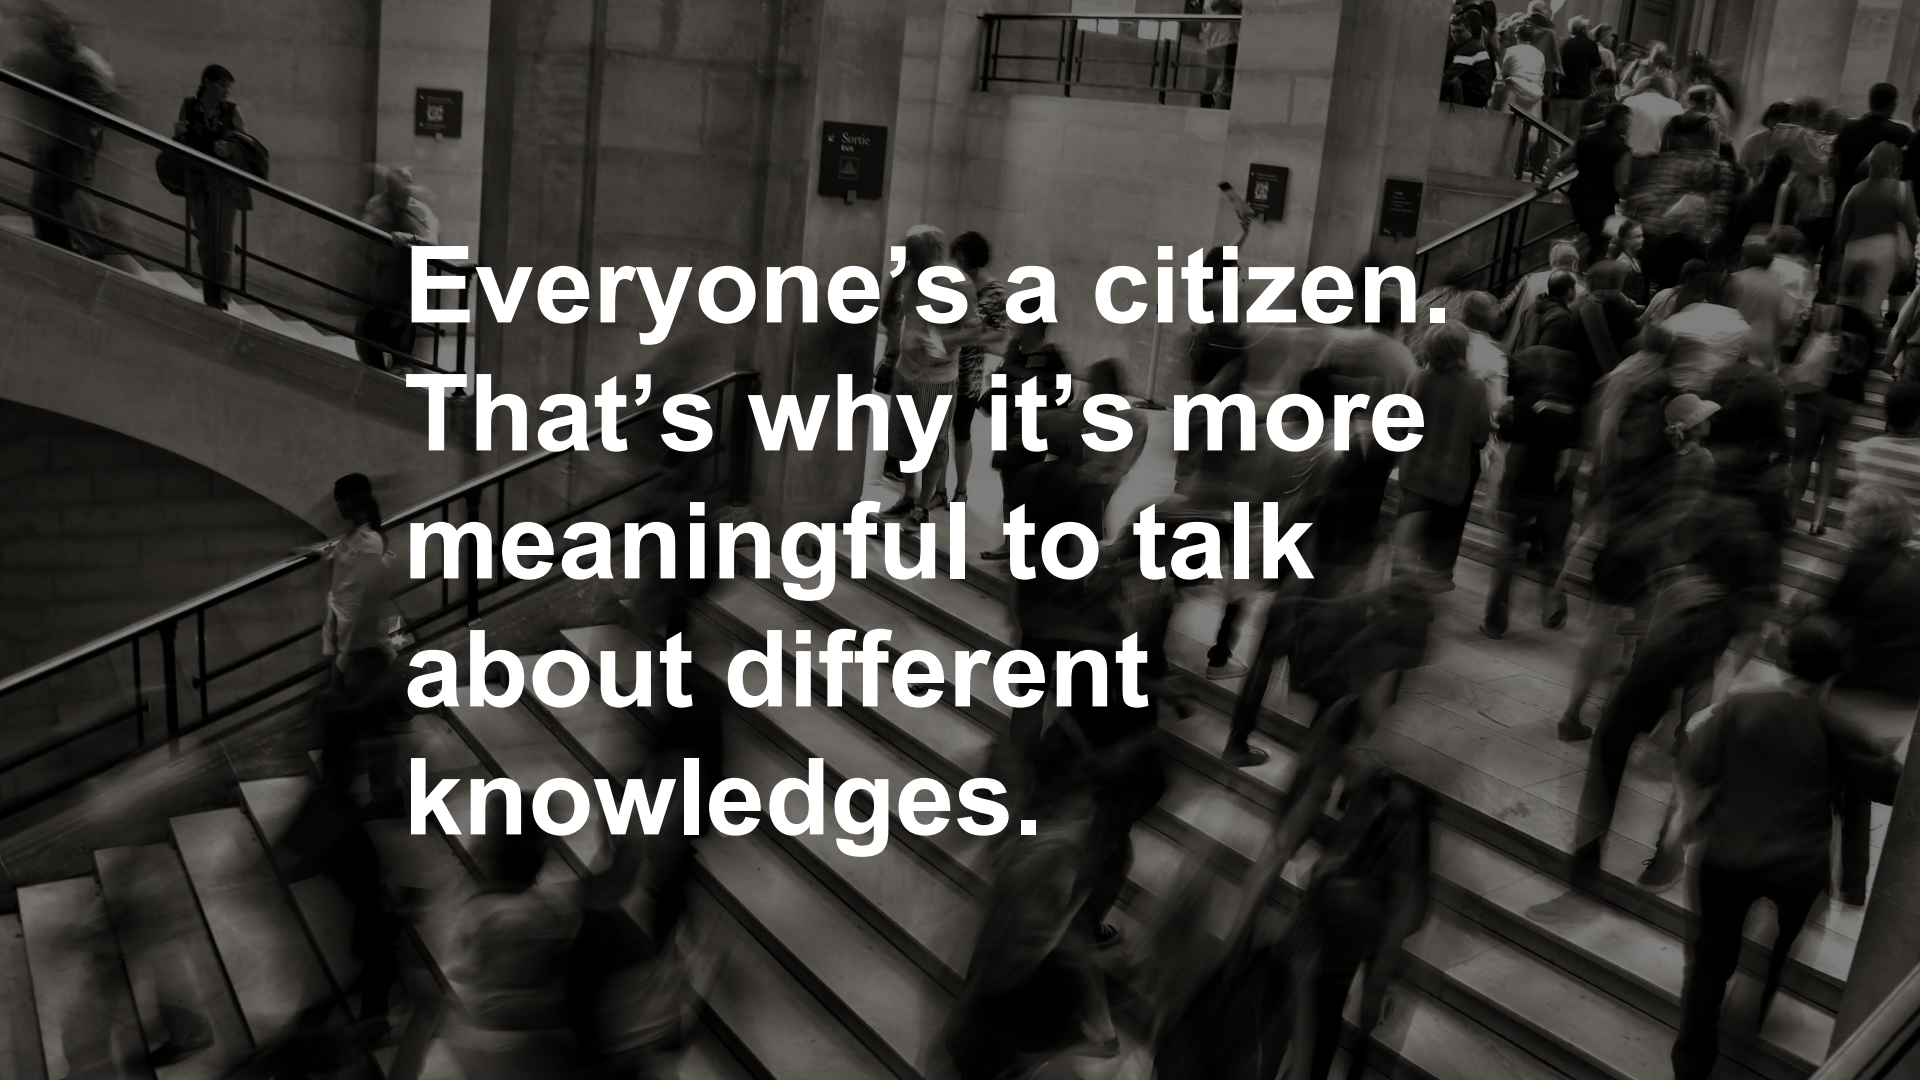

Empower

High level of
public engagement

A close-up, slightly blurred photograph of an open wooden box. The box is filled with a stack of old, sepia-toned photographs and documents. The top photograph shows a group of people, possibly a family, in a dark setting. Below it, another photograph shows a man in a suit. The box is made of dark wood and has a metal latch visible on the front. The background is out of focus, showing a blue wall and a wooden surface.

THIS TOO, IS SCIENCE

**Everyone's a citizen.
That's why it's more
meaningful to talk
about different
knowledges.**

A photograph of two people walking away from the camera under a large black umbrella in the rain. The person on the left is wearing a white knit hat and a dark jacket. The person on the right is wearing a black and white striped knit hat with a pom-pom and a dark jacket. The background is a blurred outdoor setting with trees and a building. A semi-transparent white box is overlaid on the left side of the image, containing text.

UMBRELLA CONCEPT

Could Citizen Science the concept be like Open Science? A value rather than a method or design, something that all research should strive towards: happening in a multidisciplinary “[...] framework where diverse expertises are given legitimate status.” (Alan Irwin, 1995)

CITIZEN SCIENCE TOOLBOX

Crowdsourcing
Social media research
Extended peer communities
Extended peer review
Biobanks
Ethnography
Oral History

MyData
Clinical trials
Co-design
Surveys
Games and quizzes
Crowdcrafting

SIX DEGREES OF CITIZEN SCIENCE?

From popular science, science as
entertainment...

... to co-design, even science without
professional researchers.

WHAT MAKES IT PAINFUL

Letting go of the notions that...

... public is ignorant.

... science is objective.

... facts speak for themselves.

... boundaries between scientific disciplines are lasting and meaningful.

WHAT ARE THE BUILDING BLOCKS STILL MISSING?

Repositories?
Standards?
Funding?
Legislation?
Awareness?
Education?
Fora?
Platforms?
Channels?
Language?
Interoperability?
Political will?

Openness in Education and Research 28.10.2016

From 9.30 to 15.30

Athena, Siltavuorenpenger 3A, hall 302

13.10-15.00 Citizen Science as a Research Method

Possibilities and challenges of Citizen Science in research from viewpoint of training, technology etc. What kind of experiences we have and what researchers should know?
