

# The National Digital Library of Finland – Public Interface FINNA

Aki Lassila

Head of Development

National Library of Finland / Library Network Services

# Outline

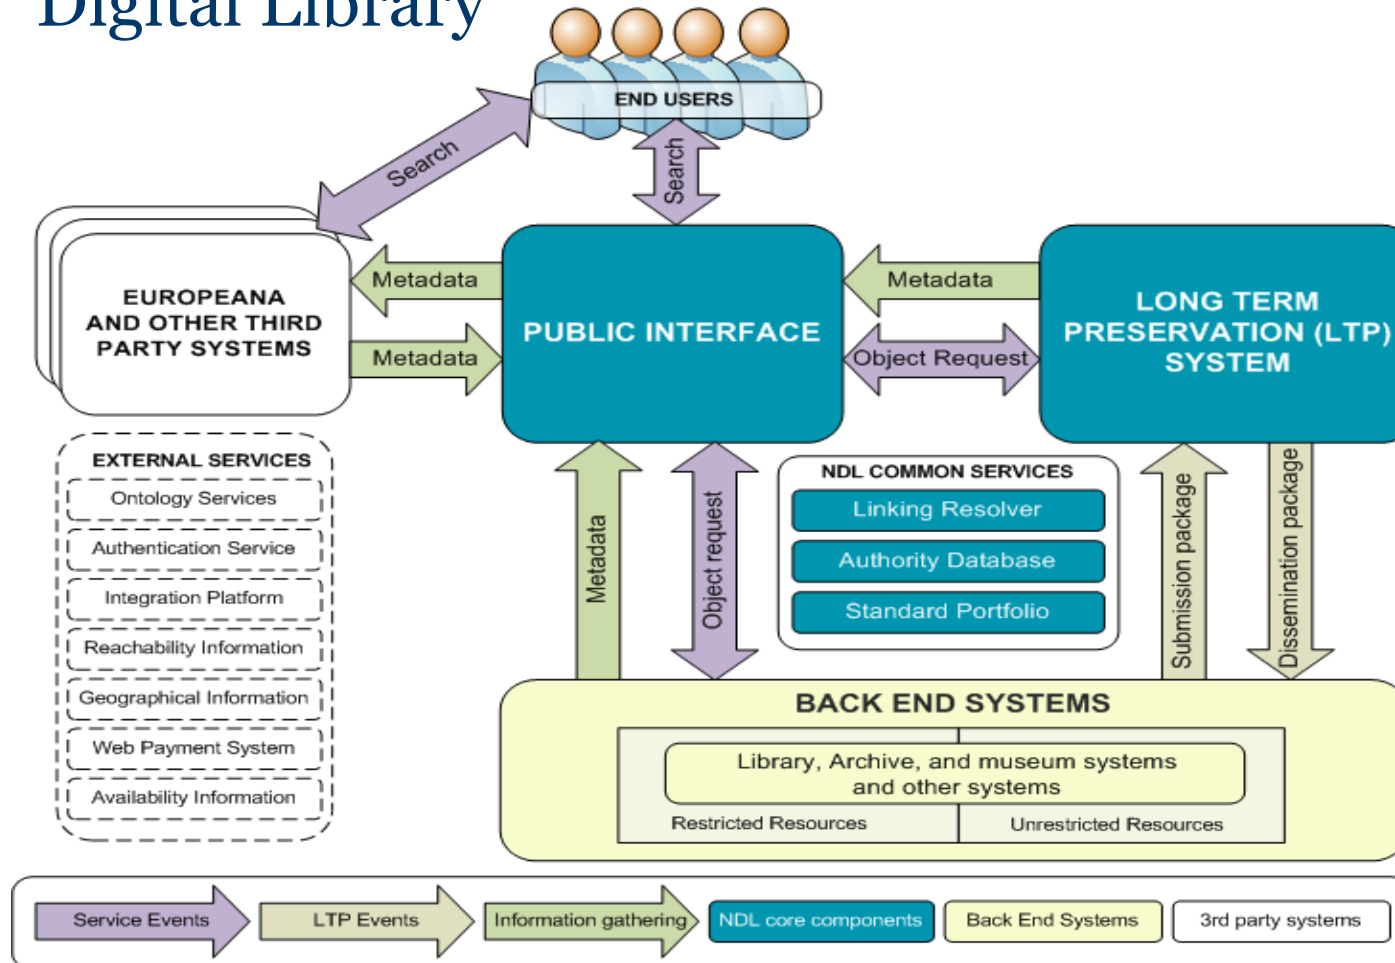

- National Digital Library of Finland
- Making of Finna
- Public interface Finna
- Demonstration of the public interface Finna

# National Digital Library of Finland

National Digital Library means:

- **Common user interface** for the information resources of libraries, archives and museums (in operation 2012).
- **Digitisation** of the most essential cultural heritage materials of libraries, archives and museums.
- Development of a **long-term preservation solution** for electronic cultural heritage materials (in planning phase).
- National Digital Library works as an **aggregator** for the European Digital Library **Europeana**.

# Enterprise Architecture of the National Digital Library

NATIONAL LIBRARY NETWORK SERVICES

# The Public Interface FINNA

Users can:

- Search information from archive, library and museum systems and databases.
- Retrieve materials, such as pictures, documents, newspapers, research documents, video and audio recordings.
- Access digital services, such as renew loans, buy pictures and order documents.

One system and one metadata index, multiple views and services:

- National view for all content.
- Local and sector specific views (museum's view).
- Institutions' own views.

## Benefits of the National Digital Library to the Society

- Improves availability of electronic information resources and services and makes their use easier.
- Strengthens cooperation across organisational and sectoral borders.
- Reduces overlapping expenses from digitisation and management, distribution and preservation of electronic material.
- Improves interoperability, manageability, and efficiency of processes.
- Preserves the potential of cultural heritage material far into the future.

## Key Factors behind Success

- Central funding for infrastructure services.
- Organised structures of library sectors.
- Tradition of collaboration especially in library domain.
- Systematic development of centralised services.
- Customer organisations involved in steering centralised services.

# Main Principles Steering the Development of the NDL Public Interface Finna

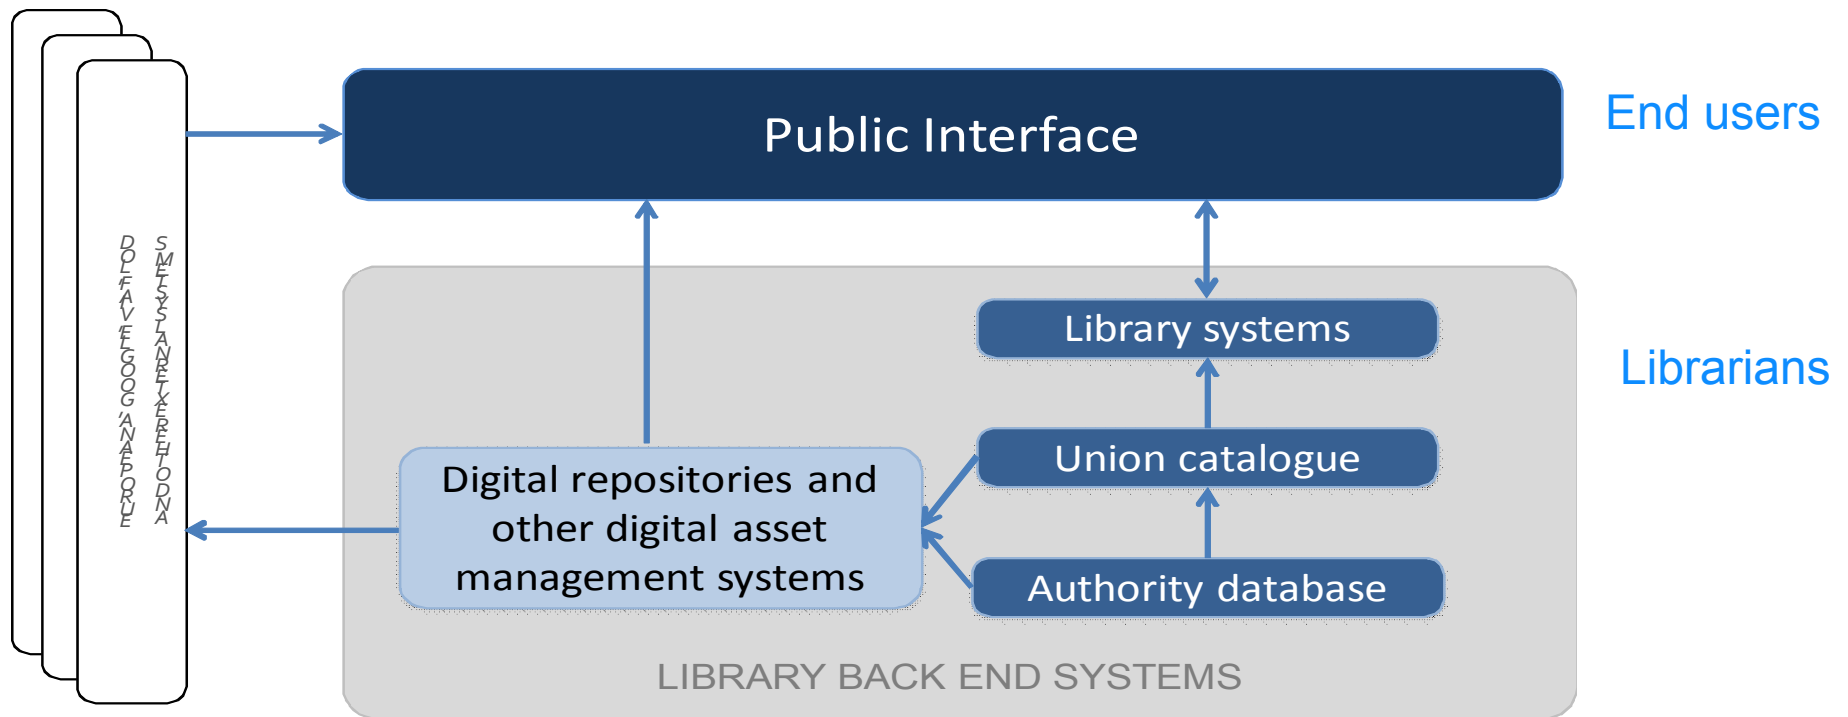

- Development is based on the **requirements** defined together with libraries, archives, and museums.
- Organisations will become users of the software in **phases**.
- Development occurs in **development cycles**.
- The services **are planned together** with the customers.
- The user interface software is based on **VuFind** and additional open source software modules.
- **National Library** is responsible of the development of the **software**.

# Customer driven development and Finna

- Why open source software (OSS) and agile development method?
  - Value of software is in how it enhances (existing) activities or enables (more efficient) new ways of doing things.
  - Above mentioned issues rely on e.g. how easily or efficiently users can utilize the system/software in question.
  - Note that software's functionality is not enough but usability, integratability (related to openness, APIs), and customization are also important.
- Development progresses in development cycles and issues are prioritized according to users' needs.
- NDL's user interface Finna will need to continue to develop also in the future.
- Agile development methods (e.g. Scrum) and OSS based development fully support ongoing, customer driven service development work.

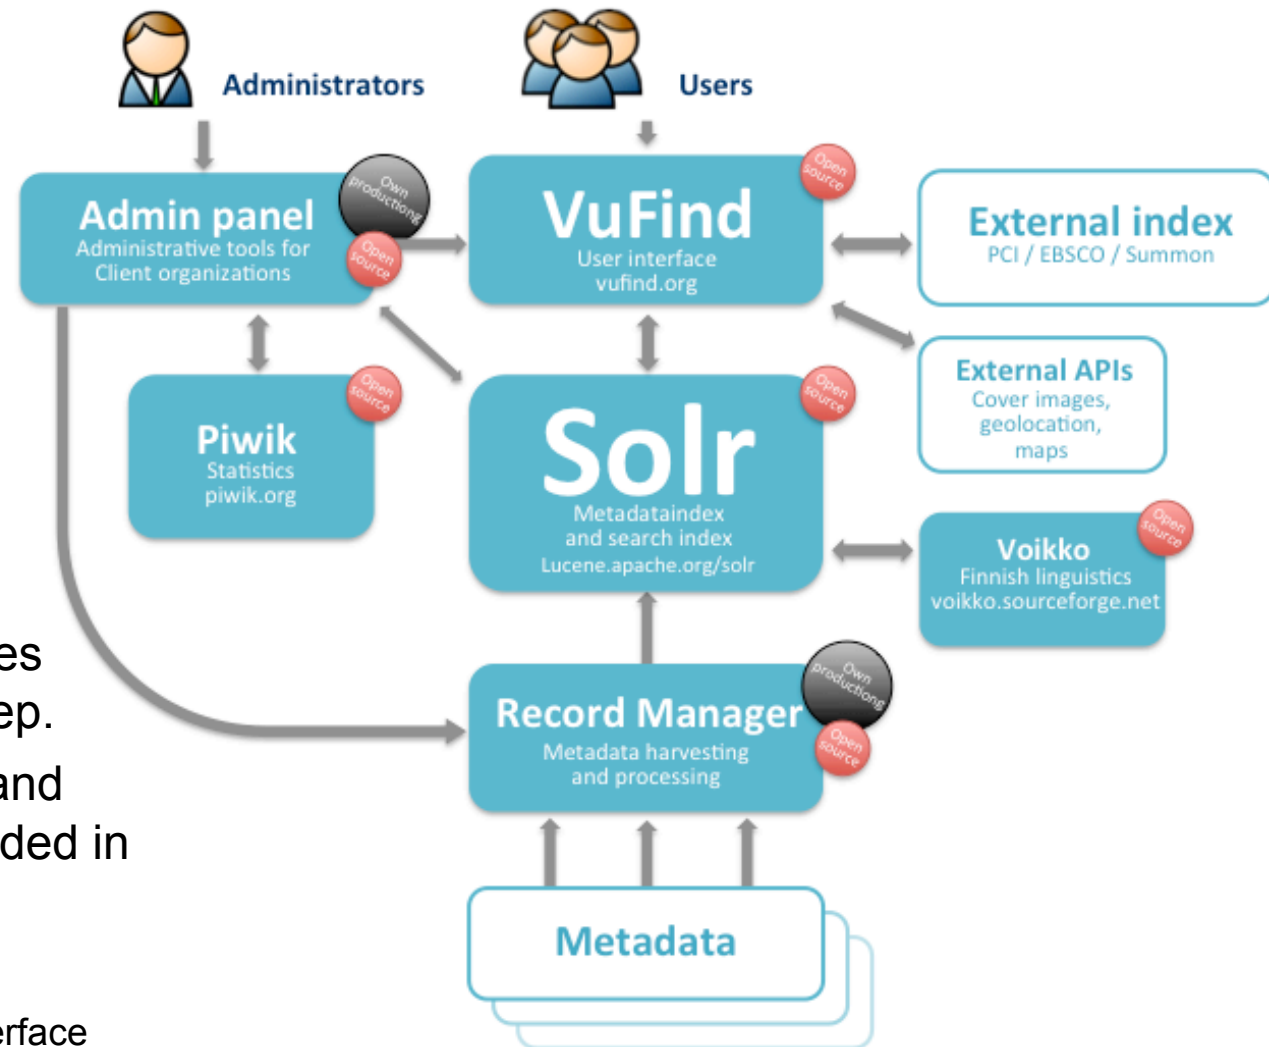

# Backend systems of FINNA

## Software Architecture of the Public Interface Finna

- Finna is based on several software modules that are integrated together; therefore new modules can be added to the system if necessary
- Finna consists of two main parts:
  - End users' national interface or portal
  - Archives', libraries', and museums' administrator tools
- Main modules of the Finna system are:
  - End users' interface based on VuFind
  - Search engine Solr
  - Metadata harvesting and processing module RecordManager
  - Finnish linguistics module Voikko
  - External index and external APIs

- VuFind's role as the user interface is central.
- Admin panel handles statistics and upkeep.
- More functionality and modules can be added in the future.
- Finna's demo:  
[www.kdk.fi/en/public-interface](http://www.kdk.fi/en/public-interface)

## Focus in 2012–2014

- 2012:
  - Forming the User Interface consortium and collaboration structures.
  - Planning of the system and building it, launch of Finna.
- 2013: New customers, new functionalities.
- 2014: New customers, new functionalities, new partnerships.

Thank you!
