Doug Emery, *University of Pennsylvania*
Will Noel, *University of Pennsylvania*
Dot Porter, *University of Pennsylvania*

http://iiif.io/

This research was primarily funded by the Andrew W. Mellon Foundation

Image Repositories

- Increase in digitization
  - Particularly precious, fragile, beautiful objects
  - e.g. Medieval Manuscripts

- Digitized images online
  - Increasingly Open
  - At high resolution

- Easy to capture an image
- Very hard to capture the text

Source gallica.bnf.fr / Bibliothèque nationale de France

http://gallica.bnf.fr/ark:/12148/btv1b8449691v/

Calendar Pilot

- Ubiquitous in liturgical books
  - e.g. Books of Hours
- Structured and often tabular:
  Date, Day, Saint / Event

- Content varies slightly
- Variation details give us information about the provenance of the object

- Much easier to transcribe than full text

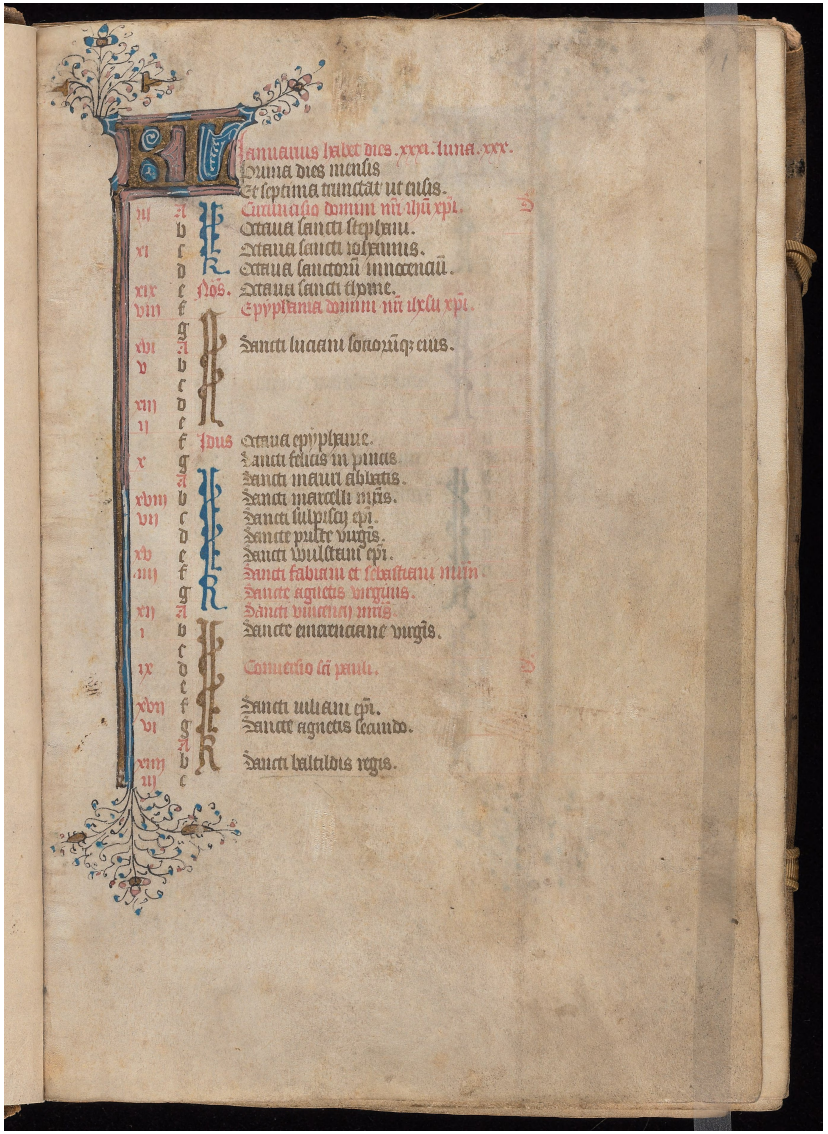
http://www.e-codices.unifr.ch/en/bge/lat0033

Collaborative Crowd Sourcing?

- Meeting at U. Penn including content providers and scholars

- Plan:
  - Collect transcriptions *together*
  - Analyze similarities between manuscripts for patterns of provenance

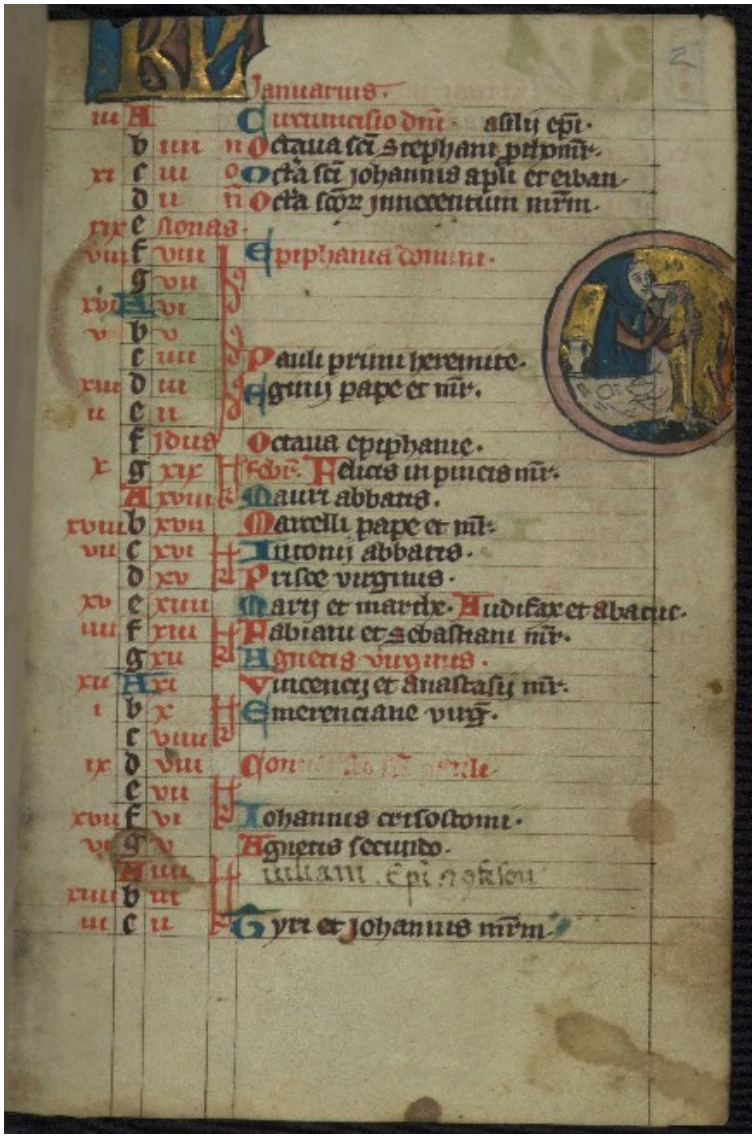
- Manuscripts and images distributed: need a community to collect sufficient data



http://brbl-dl.library.yale.edu/vufind/Record/3446275

Micro Repository Rant: TEI

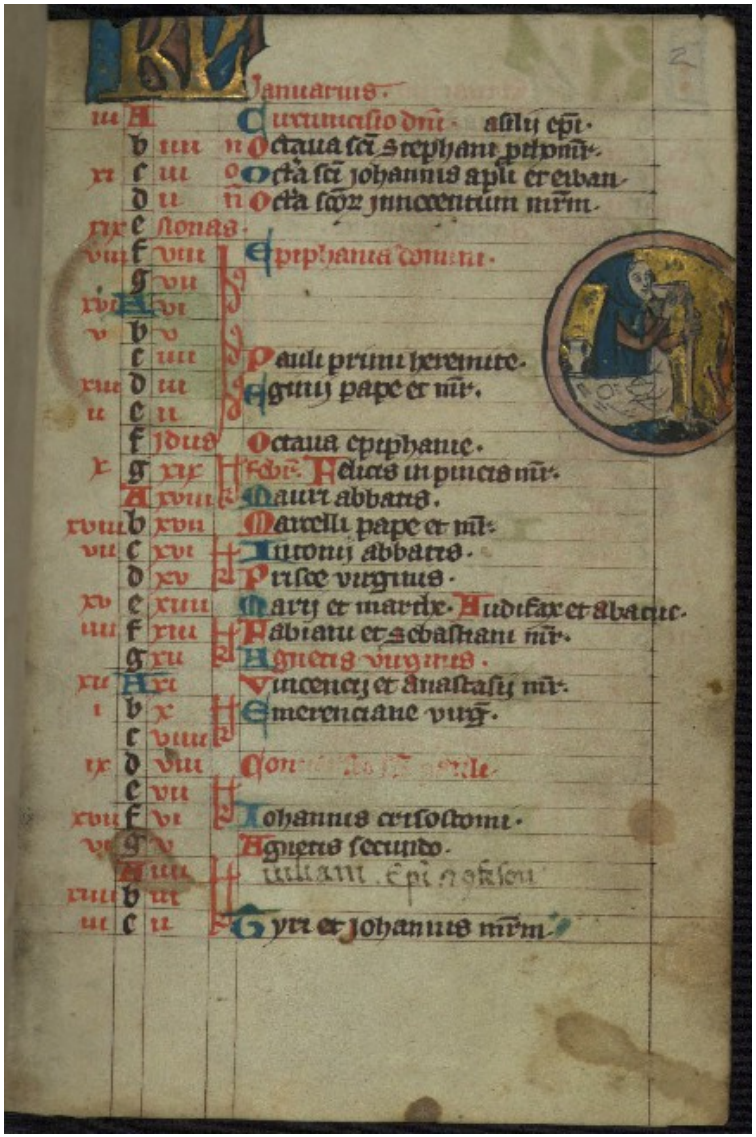
- Most transcribing done in TEI
- Terrible for this use case:
  - Single XML file
  - Single author
  - Single location
  - Hard to link to images
  - Tries to describe too much
  - Impossible to use once created
- Creating TEI is good for:



http://www.thedigitalwalters.org/Data/WaltersManuscripts/html/W41/

Micro Repository Rant: TEI

- Most transcribing done in TEI
- Terrible for this use case:
  - Single XML file
  - Single author
  - Single location
  - Hard to link to images
  - Tries to describe too much
  - Impossible to use once created
- Creating TEI is good for:
  - The academic exercise of creating TEI



http://www.thedigitalwalters.org/Data/WaltersManuscripts/html/W41/

Requirements

- Distributed image content
  - Consistent, rich API
- Selection of regions
  - Base, not displayed size
- Alignment of text with region
  - Distributed creation
  - Distributed curation
  - Multiple texts per region
  - Styling of the text
  - Some semantics

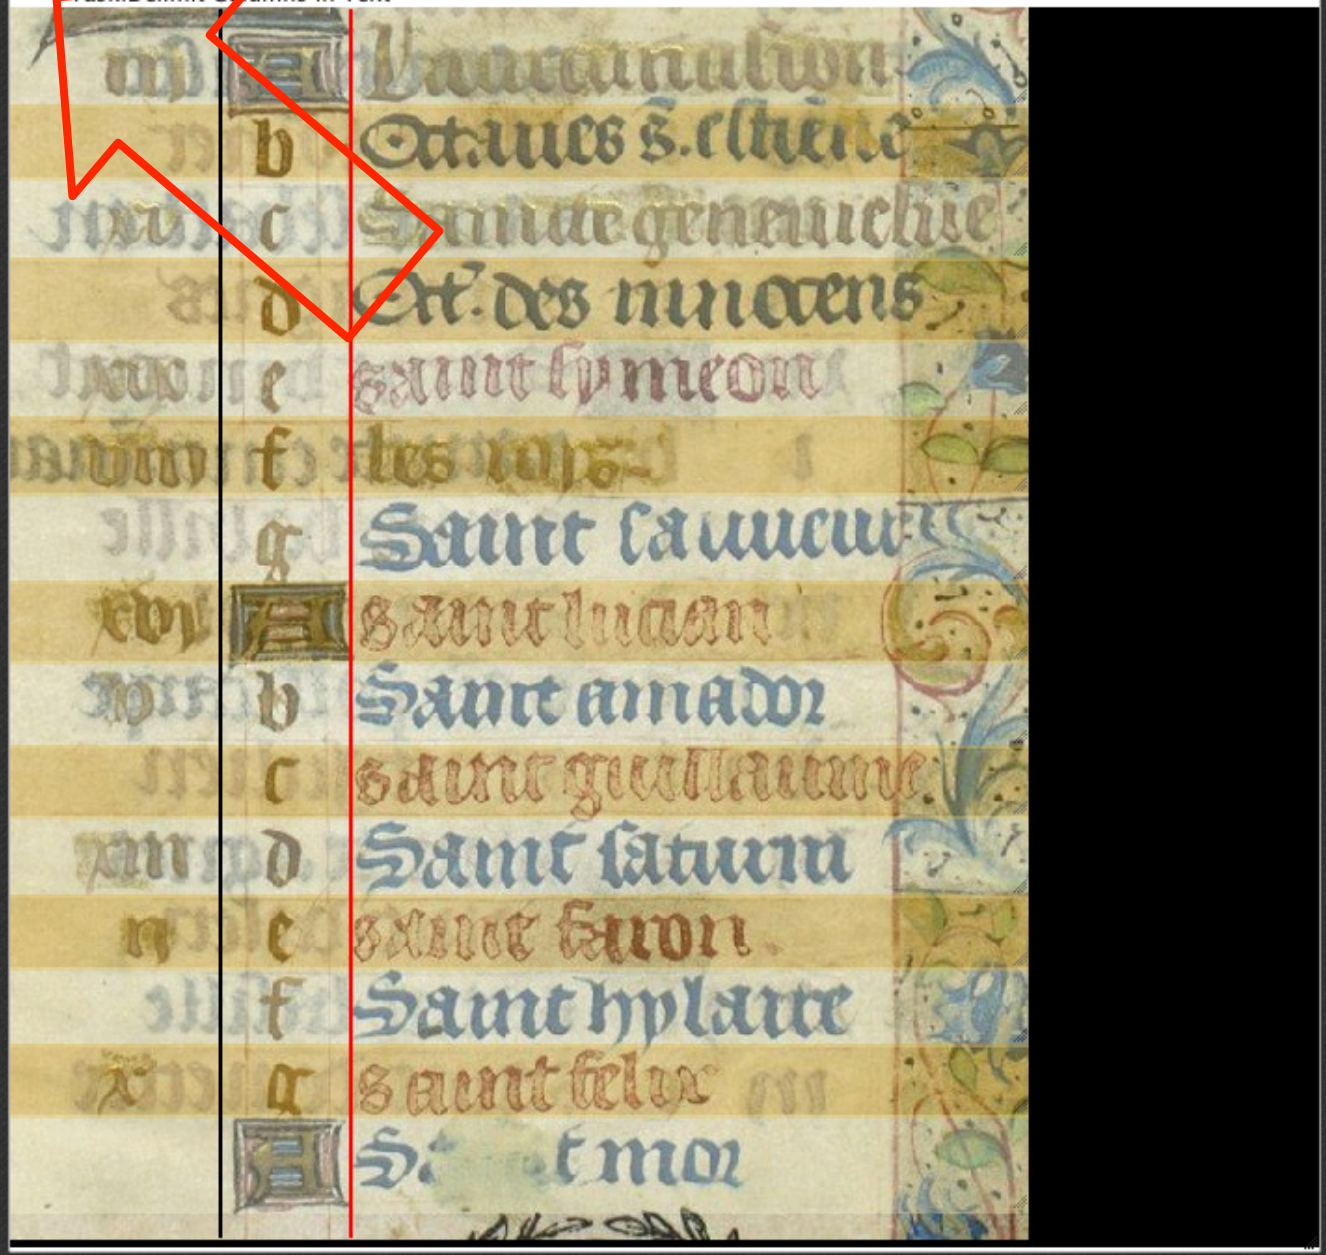
Task:Delimit Columns in Text

Delimit View : Temporary Calendar Images

Task: Delimit Columns in Text



Open Technology

- Line/Column inspiration from TPEN (IIIF compliant)
  - Transcription tool developed at St. Louis
  - http://t-pen.org/TPEN/
  - Line detection needs correction, no internal columns

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15

Boring (but Open) Metadata

- Metadata collection to drive the analysis
  - Stored along with the segments
  - Defaults are normally correct
  - Custom extension, not intended for general purpose use

- Convenient to do inline
  - Other metadata could be added
  - Could be done in a different workflow

Open Technology: IIIF Presentation API

Text/Image Linking is a subset of a larger challenge:

- Non-Text / Image Linking
- Dynamic Images
- No Image to link to
- Multiple Images
- Parts of Images
- Parts of larger texts
- Distributed images, texts and links

Need an indirection layer:

- Solution: align text and image with an abstract Canvas

http://iiif.io/api/presentation/1.0/

Micro Repository Rant 2: RDF Serialization

"RDF/XML was the Semantic Web's 3 Mile Island incident"
-- Manu Sporny, *http://manu.sporny.org/2012/nuclear-rdf/*

Or … RDF – Not in my back yard!

- Serializing a graph is, admittedly, hard
- RDF/XML is terrible, and too many others
- Web currently uses JSON as convenient transfer syntax
- JSON-LD allows transfer of RDF in syntax that does not require full RDF stack, just a JSON implementation
- … as available in every web browser

- **Rob's Conclusion: Require JSON-LD**
  - *http://json-ld.org/*

JSON-LD Context Magic

```
{  // Canvas resource
 "@context":"http://iiif.io/api/presentation/2/context.json",
```

@context provides mapping for JSON keys into RDF.

```
"sc":"http://www.shared-canvas.org/ns/",
"oa":"http://www.w3.org/ns/oa#",
"service":{
  "@type":"@id",
  "@id":"sioc_svcs:has_service"},
"height":{
  "@type":"xsd:integer",
  "@id":"exif:height"},
"sequences":{
  "@type":"@id",
  "@id":"sc:hasSequences",
  "@container":"@list"}
```

Open Technologies: REST

- Experimental IIIF REST specification
  - *http://iiif.io/api/annex/rest/*
  - For both Presentation and Image

- Trivial Python/WSGI handler
  - Processes @context and generates identities
  - Stores in MongoDB (but API is agnostic)
  - Follows IIIF Presentation and Open Annotation
    - *http://www.w3.org/community/openannotation/*
  - Returns the correct JSON-LD
  - Doesn't fully handle image upload yet

The Future is Now

- IIIF Image API 2.0
  - Request for Comment period open!
  - *http://iiif.io/api/image/2.0/*

- IIIF Presentation API 2.0
  - Ditto!
  - *http://iiif.io/api/presentation/2.0/*

Please give us feedback: *iiif-discuss@googlegroups.com*

- Ongoing work with U.Penn to make a more robust system

Thank You
