Introduction

This presentation will discuss two features:

1. Obtaining ORCID identifiers
2. Using ORCID identifiers

Imports

The screenshot shows a software interface with a menu open for importing data. The menu is titled 'Import from' and lists several options: Atom XML, BibTeX, DOI (via CrossRef) (which is highlighted in blue), DSpace Metadata, EPrints XML, EndNote, Microsoft .docx, OpenXML Bibliography, PubMed ID, and PubMed XML. Above the menu are buttons for 'New Item' and 'New Project'. To the right of the menu is an 'Import' button. Below the menu, there are checkboxes for 'User Workarea', 'Archive', and 'Retired'. A table with columns 'Last Modified' and 'Title' is visible, showing two rows of data. At the bottom, there is a dropdown menu for 'Abbreviated Title' and an 'Add Column' button.

Public or Member API?

- The Public API is a query API
- It is free and easy to use.

We cannot use this approach to update an ORCID profile for two reasons:

1. We need to use the Member API to make updates
2. The profile is owned by the person not the organisation they are affiliated to.

Member API

- Need to be registered
- Need to authenticate
- Need to construct the XML for the data to be sent
- The documentation on the ORCID website is very good
