

SimpleREST

3rd party apps

Communicate through the REST interface using SimpleREST and do item, user and collection create, read, update and delete actions.

Call HTTP methods

Return in XML or JSON

SimpleREST is a Java webapp using the Restlet framework. It works as an app inside DSpace. It supports retrieving, editing and adding data to a DSpace instance using XML (NLF-format) and JSON.

SimpleREST provides an interface for our internal apps like SYLI to work seamlessly with DSpace.

Java DSpace api

DSpace 3.x instance
